

10-Jun-2022

To whom it may concern,

Following a successful tender, we have established a contract in February 2022 with the company SAFENESS for the provision of Drilling HSE Advisors for an offshore P&A and Acid Job Operations on board our platform "Hasdrubal" using Offshore Rig "TOPAZ Driller".

SAFENESS management provided a wide range of local and international HSE professional profiles that exceeded our requirements. The profiles came with high experience in drilling operations and unmatched skills compared to competition.

We have conducted several technical interviews and selected two candidates that have been performing an excellent job in assisting and monitoring the rig operation, coaching the crews, leading safety meetings and proposing innovative HSE solutions throughout the entire operation.

Based on all of this and more, I highly recommend with no hesitation the company SAFENESS for the provision of HSE professionals to any client in the oil and gas industry.

Moncef Chebbi

Operations Manager
